Business software often fails to provide robust data analytics and report writing functionality but directs users towards third party reporting tools.

ExpoCise provides this functionality; it has the ability to analyze, summarize, chart and report on any structured data.

ExpoCise is not limited to a specific industry vertical.

Overview

At Technology Solutions Associates, we strive for simple excellence in each piece of software we develop. *ExpoCise* is no exception to that rule.

ExpoCise is an incisive analytics tool that provides the user with the ability to summarize, analyze, chart and present data in ExpoCise Views, Pivot Views, Charts and Reports.

Summarize with Views

The data analytics portion of ExpoCise has the ability to filter, sort, and parse any structured data.

The filter criteria within a view can be as simple or as complex as necessary to obtain the precise analysis you need.

Microsoft® SQL views are the basis for the data source objects used at the core of all the reports, views, or charts and can be defined by any SQL developer familiar with database schema.

Analyze & Chart with Pivot Views

Pivot Views provide powerful analyzing capabilities utilizing column and row adjustments along with mathematical functionality.

Chart & Report

Once the data is viewed, it can be charted to provide a visual representation for trend analysis. ExpoCise Reports provide the ability to print or email your data in an easy to modify, yet very presentable format.

Exporting Capabilities

ExpoCise can export to Microsoft Excel, Adobe PDF, or Rich Text Formats.

Software Requirements

An instance of SQL Server 2012, any edition or an instance of SQL Server 2008 R2, any edition.

Minimum Hardware Requirements

Windows 7
100 MB Free space
2 GB Ram
.Net Framework 4.5
